Experience

- Used Java/J2EE to create simple web applications for cataloguing inventory and creating an Emergency Contact database for company employees.
- Used Microsoft ASP/C#.NET and Microsoft SQL to manage, maintain, and upgrade a client's website.
- Created multiple web applications and web sites using PHP to handle a content management system which used a MySQL database.
- Used HTML, CSS, and JavaScript to handle client-side programming.
- Used Unix-based systems as a platform for development
- Used SVN Repositories to work as a team even when developers worked from separate locations.
- Used a combination of Trac and Hudson as a way to keep team members organized when working on the same project.

Employment
